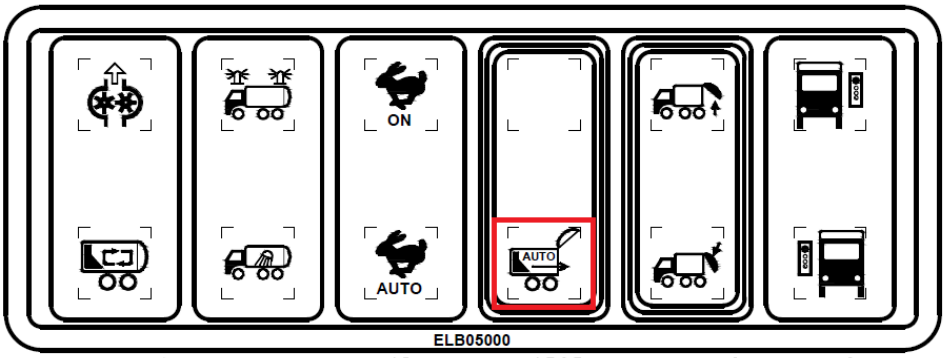
Model: **Minimax and Automizer Full Eject**

Subject: **Auto-Eject Operation**

Labrie units equipped with the full-eject platform (i.e. Minimax and AUFE) have a feature which allows the load to be ejected automatically by following these steps outlined below.



- Remove tailgate pins.
- Engage pump.
- Hold down the auto-eject button. This will raise the tailgate and sequentially eject the load. Once the load is ejected, continue to hold and the packer will retract then the tailgate will close.
- Install tailgate pins.
- Empty clean outs.

Note If you manually raise the tailgate then push and hold the green pack button the packer will fully extend and allow trash to drop behind it.

Please contact the LabriePlus Service Department at (800) 231-2771 with any questions or for further information.
