Model: All with Labrie-Installed CNG Fuel Systems

Subject: CNG Purge Kits

When replacing CNG fuel system components, it is necessary to purge the fuel system, both prior to and after performance of the repair (refer to LabriePlus TSB #12-18, released September 30, 2012). A special purge kit is required to connect the nitrogen tank to the CNG system; the following kits are available for purchase through LabriePlus:

LabriePlus part number 167067 – Purge kit with nitrogen tank regulator, hose/valve assembly, and OPW quick-connect

LabriePlus part number 167068 – Purge kit with hose/valve assembly and OPW quick-connect (must be connected to a nitrogen tank regulator)

Please contact the LabriePlus Service Department at (800) 231-2771 with any questions or for further information.
