Subject: New Mac Valve

A new type of Mac pneumatic control valve has been introduced into the Labrie and Wittke product lines. The current production Mac valve, part number PNV01965-01, may be identified by its red & black wire leads, with a white connector. The PNV01965-01 Mac valve replaces the PNV01965 and S16-0548 Mac valves.

The PNV01965-01 Mac valve is equipped with a circuit protection diode, whereas the previous production Mac valves did not have diode protection. The current production Mac valve may be used as a substitute for the previous production Mac valve provided the polarity of the new Mac valve is correctly observed during installation. The red wire must be connected to the positive (+) power source, and the black wire must be connected to the ground (-). Polarity is also marked on the wire connector at the Mac valve for reference.

Please contact LabriePlus at (800) 231-2771 with any questions or for further information.
