Subject: Electronic Control System PC Connection Kits

The various control systems for Labrie Enviroquip Group products, both past and present production models, allow the connection of a PC to aid in both troubleshooting and adjusting the various control functions of the system. For the IFM and Delastek systems, a modem may also be connected to allow remote diagnostics by LabriePlus.

Kits are available to allow the connection of a PC to the various operating control systems of Labrie Enviroquip Group products, and may be purchased through LabriePlus. The chart on the following page identifies these kits by part number; they may be ordered through LabriePlus.

These various kits connect to the PC's DB9 serial port; it has been noted that many PC manufacturers are no longer supplying this port on laptop computers. If no serial port is available, a USB to serial port adapter may be used, however be aware that some adapters are not compatible with these operating systems. LabriePlus part number ELC01475 adapts the DB9 serial port to a USB port and has been proven to work well with most computer systems.

The software used is compatible with Microsoft's Windows XP & Vista operating systems. For connection to a PC using the Microsoft Windows 7 or 8 operating system, please contact the LabriePlus Service Department for assistance; unfortunately the Easy Supervisor software is not compatible with Windows 7 or 8.

Please contact the LabriePlus Service Department at (800) 231-2771 with any questions or for further information.
